

SYFPAC® is the Italian brand of Blow Fill Seal machines manufactured by Brevetti Angela since 1977

SYFPAC® BFS machines are designed for **aseptic production of pharmaceutical liquids** in vials, ampoules, prefilled syringes or bottles. They are perfect for production of eye drops, injectables, WFI, enemas or IV solutions.

SYFPAC® BFS machines work on closed parison **Blow Fill Seal technology**, which means that the container is formed inside the machine, filled and sealed through closed parison in aseptic conditions, in a few seconds, in a continuous automatic process with no human interaction. Fully compliant with new **Annex1**, exceeding its requirements.

Compact: smallest footprint, only requires 6m² of Grade C clean room.

Flexible: works with HDPE, PP LDPE. Produces aseptic containers from 0.25ml to 50ml. Can fill thermolabile products like vaccines, as well as products with high viscosity or suspensions.

Fast: delivers up to 40.000 containers per hour.
